

Name _____

How Long is a Jellyfish?

Some jellyfish are only a few inches long. But some can grow to be 100 feet long. How long is 100 feet? Let's find out. Take a string and measure off 100 feet. Then cut the string so it is 100 feet long. Now you have a string as long as a jellyfish!

Now answer the following questions.

1. How many times will the string go around your waist? _____
2. How many times will the string go around your arm? _____
3. How many times will the string go back and forth across your classroom? _____
4. How many times will the string go around your desk? _____
5. How many times will the string reach from your head to your foot? _____

What else can you measure with the string? Measure three things. Then write a sentence that tells what you measured and how many times your jellyfish string measured them.

1. _____

2. _____

3. _____
