

Name _____

The Watery Part of a Jellyfish

A jellyfish is 97% water. That means that for every 100 parts of a jellyfish, 97 of them are water! Only 3 of those parts are something else.

Below is a set of 100 squares. Color 97 of the squares blue. This is the amount of water in a jellyfish. Color three of the squares some other color. This is the amount of other stuff in a jellyfish.

What do you think of that?
